Environment

Waste management program

Our waste management plan is an action that promotes the achievement of waste management objectives. It focuses on reducing the amount of waste sent to a landfill site, by focusing on the Reduction, Reuse, Recycling and Revalorization of waste, as well as on changing the behavioral habits of

site users. Its fundamental objective is the elimination of the ultimate residue, i.e. that which cannot be reduced at the source.

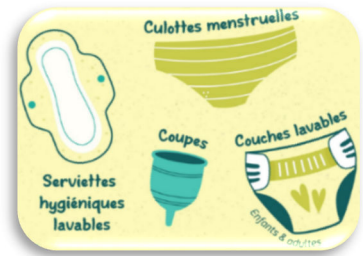

To this end, we have in place:

- A data recording program related to our waste production rates of all types, as well as landfill diversion rates related to the various strategies adopted.
- An eco-centre for managing non-compostable waste destined for recycling, reuse, or reclamation, in accordance with standards.
- Policies for the management of waste from construction projects.
- A tenant communication program. Link 1350-1360 includes a section on the environment in each edition, including waste management.
- Policies for environmentally and socially responsible procurement.
- A supplier validation program to ensure that their company operates according to the same environmental values as GWLRA.
- We have re-started this year, a green committee that includes our tenants. The next meeting will be held in the fall and will touch upon the notion of accessibility.

In fact, should you have any questions or suggestions, please address those at: veronika.kowalska@gwlra.com

Support program for the purchase of sustainable hygiene products for adults and babies

Did you know that most municipalities offer a grant program for the purchase of sustainable hygiene products, such as diapers and feminine hygiene products? They cover a large portion of the purchase cost of eligible items. Check with your municipality. Some even reimburse 100% of the purchase cost! It's worth it!

In my building

Washroom renovation

This year, the building began renovating the restrooms, which are in dire need of a fresh look. The project will be carried out on five floors per year, over a period of four to five years. Please note that while we won't be renovating the restrooms on your floor, this year, your turn will come.

LEED 4.1 certification

We are proud to announce that our building qualified for the gold level in our latest LEED certification. Wondering what that is? LEED (Leadership in Energy and Environmental Design) is the world's most widely used green building rating system. Available for virtually all building types, LEED provides a framework for healthy, efficient, and cost-effective green buildings. LEED certification is a globally recognized symbol of achievement and leadership in sustainable development.

Fitness classes

The next fitness activity is coming soon. Starting Thursday, August 28th, you can register for classes that will be starting at the end of September.
